Controlling dangerous dogs

Ninth Report of Session 2017–19

*Report, together with formal minutes relating
to the report*

*Ordered by the House of Commons
to be printed 12 September 2018*

HC 1040

Published on 17 October 2018
by authority of the House of Commons

The Environment, Food and Rural Affairs Committee

The Environment, Food and Rural Affairs Committee is appointed by the House of Commons to examine the expenditure, administration and policy of the Department for Environment, Food and Rural Affairs and associated public bodies.

Current membership

[Neil Parish MP](#) (*Conservative, Tiverton and Honiton*) (Chair)

[Alan Brown MP](#) (*Scottish National Party, Kilmarnock and Loudoun*)

[Paul Flynn MP](#) (*Labour, Newport West*)

[John Grogan MP](#) (*Labour, Keighley*)

[Dr Caroline Johnson MP](#) (*Conservative, Sleaford and North Hykeham*)

[Kerry McCarthy MP](#) (*Labour, Bristol East*)

[Sandy Martin MP](#) (*Labour, Ipswich*)

[Mrs Sheryll Murray MP](#) (*Conservative, South East Cornwall*)

[David Simpson MP](#) (*Democratic Unionist Party, Upper Bann*)

[Angela Smith MP](#) (*Labour, Penistone and Stocksbridge*)

[Julian Sturdy MP](#) (*Conservative, York Outer*)

Powers

The Committee is one of the departmental select committees, the powers of which are set out in House of Commons Standing Orders, principally in SO No 152. These are available on the Internet via www.parliament.uk.

Publications

Committee reports are published on the Committee's website at www.parliament.uk/efracom and in print by Order of the House.

Evidence relating to this report is published on the inquiry publications page of the [Committee's website](#).

Committee staff

The current staff of the Committee are Sian Woodward (Clerk), Ben Street (Second Clerk), Andy French (Committee Specialist), Xameerah Malik (Senior Committee Specialist), Thomas Smallwood (Committee Researcher), James Hockaday (Senior Committee Assistant), Ian Blair (Committee Assistant) and Annabel Russell (Committee Assistant).

Eliot Barrass (Clerk) and Daniel Schlappa (Second Clerk) were also Committee staff during this inquiry.

Contacts

All correspondence should be addressed to the Clerk of the Environment, Food and Rural Affairs Committee, House of Commons, London SW1A 0AA. The telephone number for general enquiries is 020 7219 7341; the Committee's email address is efracom@parliament.uk.

Summary

The UK is a nation of dog lovers. Whilst the vast majority of dogs pose no threat to the public, concern is growing that the Government's current approach to dog control is failing to protect people adequately. In 1991 the Dangerous Dogs Act outlawed certain breeds/types of dog to protect the public from attacks, but since then the number of yearly fatalities has continued to rise. Hospital admissions for dog attacks have increased by 81 percent since 2005. An unacceptably high number of victims suffer horrific life-changing injuries in these incidents. Even where no physical injury occurs, dog aggression can cause significant psychological distress. At the same time, too many harmless dogs are being destroyed every year because they are banned and cannot be re-homed, even if they are well tempered and pose no risk to the public.

The Government has maintained that the breed ban is essential to public safety, arguing that these prohibited dogs pose an inherent risk. Our inquiry found insufficient evidence to substantiate this claim. We agree with the Government that it would be irresponsible to amend the breed ban immediately without adequate safeguards. That does not mean that the Government should continue to sit on its hands. Changing the law on Breed Specific Legislation is desirable, achievable, and would better protect the public. The Government's lack of action on this front shows a disregard for dog welfare.

The current approach to dog control is plagued with deep structural problems. Improvements to public safety that simultaneously safeguard animal welfare can only be achieved through an open-minded engagement with new strategies. This will require time, commitment and political courage. To this end, we call on the Government to:

- immediately remove the prohibition on transferring a banned dog if it has been behaviourally assessed by experts and found to be safe. This would prevent the needless destruction of friendly animals that could be safely re-homed;
- commission an independent evidence review to establish whether the banned breeds/types present an inherently greater risk than any legal breed or cross breed;
- commission a comprehensive review of existing dog control legislation and policy, with a view to developing an alternative model that focuses on prevention through education, early intervention, and consistently robust sanctions for offenders;
- ensure all future strategies are developed with a full and transparent commitment to evidence-based policy-making. If the independent evidence review concludes there is insufficient evidence to support the Government's position on Breed Specific Legislation, this aspect of the law should be revised;
- introduce mandatory training and education courses for minor dog offences, similar to speed awareness courses for drivers;
- support wider dog awareness training for schoolchildren, and run a targeted awareness campaign for dog owners and the general public on safe human-dog interaction;

- increase support for local authorities and police forces to ensure they have the capacity to fulfil their duties; and
- engage with international partners to learn lessons and best practice from abroad.

EMBARGOED ADVANCE NOTICE: Not to be published in full, or in part, in any form before 00.01am on Wednesday 17 October 2018

1 Background

1. The Environment, Food and Rural Affairs Committee has long been interested in dog welfare. Our predecessor Committee held inquiries into Dog Control and Welfare¹ and the sale of puppies and kittens,² while in the current Parliament we have examined issues around greyhound welfare.³

2. Each year thousands of dogs are seized under the Dangerous Dogs Act 1991, and hundreds are subsequently put down.⁴ Since the Act was introduced, injury and fatality rates from dog attacks have increased.⁵ We therefore launched an inquiry on 11 May 2018 into the adequacy of the Government's approach to tackling dangerous dogs. We focused on the effectiveness of the current breed ban, and examined the actions needed to improve public safety and safeguard animal welfare.

3. We received over 400 written evidence submissions to this inquiry and held three evidence sessions between June and July 2018. A full list of witnesses can be found at the end of this Report. We are grateful to all who gave us evidence in person or in writing, as well as to the substantial number of people who contacted the Committee in relation to this inquiry.

2 Current approach to dog control

The Dangerous Dogs Act 1991

4. Over 200,000 people are attacked every year by dogs in England alone.⁶ Children under nine are statistically at most risk.⁷ There are several pieces of legislation in place to protect the public and ensure proper dog control. Our inquiry focused on one of the main pieces of legislation, the Dangerous Dogs Act 1991.⁸ The law was introduced to protect the public following a spate of high-profile attacks. Its stated aim is to:

prohibit persons from having in their possession or custody dogs belonging to types bred for fighting [...] to enable restrictions to be imposed in relation to other types of dog which present a serious danger to the public; to make further provision for securing that dogs are kept under proper control; and for connected purposes.⁹

5. Our inquiry examined whether these aims were being achieved. We focused specifically on Section 1 of the Act. This section includes so-called 'Breed Specific Legislation' (BSL), as it makes it illegal to own, sell, breed, give away or abandon specific breeds/types of dog regardless of the animal's behaviour or temperament.¹⁰ The following breeds/types are prohibited under Section 1:

- Dogo Argentino
- Fila Brasileiro
- Pit Bull Terrier
- Japanese Tosa

6. Dogs suspected of being of a prohibited type may be seized by the authorities and held in a police-appointed kennel pending examination by a qualified expert.¹¹ The majority of animals seized under Section 1 are suspected Pit Bull Terriers.¹² If the dog is found to be a banned Section 1 type, an owner wishing to keep the animal must go through court proceedings to determine that they are a fit and proper person and that the animal will not pose a risk to public safety. If the owner is successful, the dog is placed on the Index of Exempted Dogs and the owner must comply with certain conditions, including that:

- the dog is neutered and microchipped;
- the owner purchases third party insurance; and
- the dog is leashed and muzzled in public.¹³

7 RSPCA ([DDL0229](#)) para 25

8 [Dangerous Dogs Act 1991](#)

9 [Dangerous Dogs Act 1991](#)

10 Because the Pit Bull Terrier is not a recognised breed in the UK, this Report generally refers to breeds/types when discussing the provisions of Section 1 of the Dangerous Dogs Act 1991.

11 Q66

12 NPCC ([DDL0433](#)) p.2

13 [Dogs, England and Wales, The Dangerous Dogs Exemption Schemes \(England and Wales\) Order 2015](#)

7. As of May 2018, there were 3,530 prohibited dogs on the Index:

- 3,514 pit bull terrier types
- 3 Japanese Tosas
- 13 Dogo Argentinos
- 0 Fila Brazilieros.¹⁴

8. The law does not provide for the dog's owner to be changed, unless the owner dies or is incapacitated.¹⁵ If a Section 1 dog is stray, was abandoned and is being kept in a rescue centre, or if the owner is unable to care for it due to a change in circumstances, the dog cannot be re-homed and is liable to euthanasia.¹⁶ Similarly, if the owner is not judged to be a fit and proper person, the dog would be destroyed.¹⁷

Wider dog control legislation

9. Section 3 of the Dangerous Dogs Act makes it an offence for any dog to be dangerously out of control, regardless of its breed/type. A dog may be considered dangerously out of control if it:

- injures someone or their animal; or
- if a person believes the dog might injure them; or
- if a person believes the dog would injure them if they tried to stop it attacking their animal.¹⁸

10. Additional dog control legislation includes the Dogs Act 1871, which provides civil sanctions, and the Dogs (Protection of Livestock) Act 1953 which covers livestock worrying.¹⁹ More recently, the Anti-social Behaviour, Crime and Policing Act 2014 granted authorities greater powers to tackle anti-social behaviour, including incidents involving dogs.²⁰ At the same time, the maximum sentences for dog attacks resulting in injury or death were raised to five and 14 years respectively. The law was further extended to cover incidents on private property and attacks against assistance dogs.²¹

Perspectives on Breed Specific Legislation

11. The majority of public concern over the Dangerous Dogs Act has concentrated on the breed ban in Section 1, and there have been widespread calls for it to be repealed on animal welfare grounds.²² We accordingly pressed our witnesses for their views on the ban's effectiveness. The National Police Chiefs Council (NPCC) told us that "the legislation

22 See for example Blue Cross, [If looks couldn't kill](#)

is essential to keeping the public safe” and Section 1 of the Act should not be repealed.²³ The police acknowledged difficulties with legislation, however, noting that “traditional fighting dog lines had been diluted” to the degree that such dogs were often now found to be ‘near types’ that fell outside the Section 1 classifications.²⁴

12. During our evidence session, Deputy Chief Constable Pritchard representing the NPCC stated that he would support a review of the Dangerous Dogs Act, and that “we would like to move away from a specific list”.²⁵ He noted that the police would “welcome further research to understand what would be best practice” and “look for a long-term plan to change the legislation. That would be welcomed in communities and by forces”.²⁶ Deputy Chief Constable Pritchard stressed that the Government should “not just repeal it and leave it. There are still issues of risk in our society and our communities”.²⁷

13. The British Veterinary Association and British Small Animal Veterinary Association (hereafter BVA), the RSPCA, Dogs Trust, Blue Cross, Battersea Dogs & Cats Home, the Kennel Club, and David Ryan, former Chair of the Association of Pet Behaviour Counsellors, were unanimous in their condemnation of the breed specific provisions in Section 1.²⁸

14. Dogs Trust told us there was “no evidence that there has been any effect on the number of bites”,²⁹ and there was a “catalogue of research that tells us that breed is not a predictor” of risk.³⁰ The RSPCA highlighted that the conditions of seizure and kennelling could be stressful for the animal and negatively affect its behaviour.³¹ Battersea Dogs & Cats Home told us it was “heart-breaking” to put down dogs they believed could be safely re-homed.³² The organisation has said that over 70 percent of the banned Pit Bull types in its care could have gone to new owners, but were instead required to be put down.³³

15. The UK Centre for Animal Law raised additional concerns that the current focus on prohibiting certain breeds had offered false reassurances to policymakers, and distracted attention from investigating alternative and potentially more effective methods of dog control.³⁴ The Animal Behaviour, Cognition & Welfare Group further noted that:

... the stigmatisation of certain breeds through the legislation may have inadvertently increased the value of dogs as weapons in general, or particular breeds, and thus increased the problem.

Secondly the labelling of some dogs as “dangerous” carries with it an implicit suggestion that other breeds are “not dangerous”, which might lead to individuals abandoning normal risk management around these latter types, and an increased risk as a result.³⁵

16. We put these concerns to Lord Gardiner of Kimble, Parliamentary Under Secretary of State for Rural Affairs and Biosecurity. He disagreed with the assessment that Breed Specific Legislation was an inappropriate response, arguing that there was an “overriding paramount interest in making sure that the public is safe”.³⁶ Defra’s Deputy Director, Animal Welfare and Exotic Disease Control maintained that the rising number of bite incidents was not indicative of a failing system, and that the question was rather “what would have been the case without our protections and restrictions in place? That is what we do not know”.³⁷ Lord Gardiner further highlighted the moral force of prohibiting certain activities and reassuring the public that their concerns were being met:

What if ... people decided that the green light was on and we could have those breeds... What if we then found that there were an increase in fatalities? Everyone in this room, and particularly people outside, would say, “What on earth have you done?”³⁸

17. He further criticised the “fixation” on Section 1 of the Act, noting that even without it, Section 3 of the Act empowered authorities to tackle dogs of any breed/type.³⁹

Effectiveness at protecting the public

18. Despite the fairly comprehensive legislative framework aimed at preventing dog attacks, the number of bite and strike incidents has steadily increased over the years. An initial review of the Dangerous Dogs Act, published five years after the law’s introduction, showed no significant reduction in dog bites.⁴⁰ NHS data shows that between 2005 and 2017, the number of recorded hospitalisations rose from 4,110 up to 7,461, representing an 81 percent increase.⁴¹ The RSPCA told us that there was no evidence suggesting that prohibited breeds were a significant factor behind the rise.⁴² Figures from the Metropolitan Police for 2015–16 indicated that legal breeds accounted for around 80 percent of incidents involving Section 3 ‘dangerously out of control’ offences.⁴³ The annual cost to the NHS of treating dog attack victims has been estimated at £3 million.⁴⁴

19. The total number of bites is likely to be substantially higher than the NHS hospital admission figures suggest. Recent research has estimated that only a third of those suffering a dog bite subsequently sought medical treatment.⁴⁵ We also heard that only overnight

stays would be recorded in the commonly cited hospital records; victims returning home after treatment at an accident and emergency department may not be included in these figures.⁴⁶ In 2012 the Government estimated that over 200,000 people a year suffer dog bites.⁴⁷

20. Dog attack fatalities have also increased. The exact figures are not clear due to different reporting metrics and sources. Defra's submission stated that there had been 31 fatalities since 2005 involving dog attacks in England and Wales.⁴⁸ Data from the Office for National Statistics (ONS) recorded a total of 67 fatalities following dog attack incidents between 1991 and 2015, with 37 fatalities occurring between 2005 and 2015.⁴⁹

Source: Data collated from the Office for National Statistics

21. We put it to Lord Gardiner that the increase in deaths and injuries caused by dog attacks indicated that the current approach was not protecting the public adequately. The Minister stressed that there had been a number of legislative improvements over the years, but agreed that “no one is satisfied with an increase” in incidents, and that “even if there was a decrease, it is still not enough”.⁵⁰ He insisted however that maintaining Breed Specific Legislation was essential to public safety.⁵¹

22. We were concerned to hear that the Government considered the Dangerous Dogs Act to be successful on the grounds that it was impossible to tell how many attacks would have occurred without the law. This is not convincing. Children and adults are suffering catastrophic injuries. The increase in attacks - most of them from legal breeds - clearly indicates that the current approach is failing to protect the public adequately.

51 Q242

23. To ensure the public receives the best possible protection, the Government should commission an independent review of the effectiveness of the Dangerous Dogs Act 1991 and wider dog control legislation. This review should begin no later than January 2019. We expect this review to take account of the concerns and recommendations raised throughout this Report.

EMBARGOED ADVANCE NOTICE: Not to be published in full, or in part,
in any form before 00.01am on Wednesday 17 October 2018

3 Examining Section 1 of the Dangerous Dogs Act

24. It is clear to us that a full independent review of the efficacy of present dog control legislation is needed. We expect that this review would, at its heart, examine the issue of Breed Specific Legislation (BSL) and whether this represents an appropriate response to the problem of dog attacks. Key to this would be a comprehensive assessment of the evidence base and studies supporting the arguments for and against BSL. Below, we set out an indicative summary of the main issues on which we took evidence.

Current Breed Specific Legislation

Representation of Section 1 dogs in attacks

25. Defra told us the BSL provisions of Section 1 “remain important because of the heightened risk [certain breeds/types] pose”.⁵² In support of this claim, the Department referred to data from the Metropolitan Police Service, which provided a breakdown of the types of dogs involved in ‘dangerously out of control’ incidents across London.⁵³ These figures were also supplied to us by the NPCC.⁵⁴ According to the 2015–16 data, of the 468 recorded cases in which a dog was seized, prohibited Pit Bull Terriers accounted for 19.3 percent of offences, followed by legal Staffordshire Bull Terriers (17.6 percent) and other bull breeds (15.5 percent).⁵⁵ These figures could be interpreted in two ways; either that the current legislation is right to prohibit Pit Bull Terriers given the level of representation in incidents from a comparatively small population size, or that the ban on four breeds is misguided because around 80 percent of incidents involved legal types of dog.⁵⁶

26. Defra said the figures indicated “a large number of serious cases from a very small population of dogs in circulation, and that is striking evidence that there is an issue with this particular type of dog”.⁵⁷ The Department further highlighted its evidence on the 31 dog attack fatalities since 2005, in which seven Pit Bull types were involved in six of the cases: “seven pit bull terriers represents a far higher proportion involved in fatal attacks than would be expected from the proportion of such dogs in the dog population as a whole, which underlines the heightened risk these types of fighting dog pose”.⁵⁸

27. This argument was challenged by some of our witnesses. The RSPCA argued that there were no accurate demographic data on dog numbers or the Pit Bull population size, and therefore Defra’s claim that Pit Bull Terriers were over-represented “simply cannot be substantiated and it is both misleading and erroneous to do so”.⁵⁹ The British Veterinary Association similarly cautioned that there were no accurate data on bite rates and dog population sizes, which would be required to determine which breeds or cross-breeds presented the greatest public risk.⁶⁰

52 Defra ([DDL0043](#)) para 27

53 Q250

54 NPCC ([DDL0433](#)) p.3

55 NPCC ([DDL0433](#)) p.3

56 Q245

57 Q244

58 Defra ([DDL0043](#)) para 13

59 RSPCA ([DDL0466](#)) p.7

60 British Veterinary Association and British Small Animal Veterinary Association ([DDL0235](#)) para 7

28. The RSPCA also drew attention to low correlations between offences under Section 1 (for possessing a banned dog) and Section 3 offences (for incidents involving an injury or risk of injury).⁶¹ Evidence provided by one expert assessor indicated that between 2007 and 2018, only 13 percent of 198 dogs alleged to be Pit Bull Terrier types were also under a Section 3 charge for being dangerously out of control.⁶² Figures provided by the Chair of the London Police and Crime Committee showed similarly low correlations: out of 1,031 dog seizures by the Metropolitan Police in 2016–17, only 56—or 5.4 percent of the total—were seized under both Section 1 and Section 3.⁶³ These figures suggest that only a small minority of dogs were seized for being both banned and involved in incidents posing a risk to public safety.

Aggression causes and breed as a predictor of risk

29. The Government’s contention that the four prohibited breeds were inherently dangerous because they had originally been bred for “their fighting attributes” was also repeatedly challenged.⁶⁴ The RSPCA said that “such selection cannot infer inherent aggression in these types of dogs or guarantee that these attributes will be expressed”, and that the Government’s contention was not supported by scientific evidence or data.⁶⁵ Evidence submitted to our inquiry cited a wide variety of studies concluding that breed was not a good predictor of risk.⁶⁶

30. The British Veterinary Association told us that a dog’s behaviour is complex, arising “partly as a result of its inherited characteristics, but more importantly is a result of the socialisation, rearing and training provided by its owner, the environment in which the dog is kept and a given set of circumstances”.⁶⁷ Blue Cross said the notion that Section 1 dogs were inherently more risky was “fundamentally flawed”, as “any dog has the potential to be dangerous and pose a risk to the public regardless of their breed”.⁶⁸ According to the Association of Pet Behaviour Counsellors, risk levels can vary more within a particular breed than between different breeds.⁶⁹ In a survey of professional canine behaviourists conducted by Battersea Dogs & Cats Home, almost three quarters of respondents viewed breed as either not at all important or only slightly important in determining dog aggression levels. Socialisation and upbringing of the dog were instead considered critical factors.⁷⁰

Defra’s evidence base

31. A 2009 Defra-funded evidence review found that “despite considerable speculation of a role for breed as a risk factor for human-directed dog aggression, insufficient evidence exists to draw firm conclusions”. It noted that there was “some evidence” that human

61 RSPCA (DDL0229) para 6

68 Blue Cross (DDL0264) p.1

69 Association of Pet Behaviour Counsellors (DDL00184) para 2

70 Battersea Dogs & Cats Home (DDL0257) p.3

directed aggression could be inherited. The review highlighted however “the absence of high quality evidence relating to risk factors” and cautioned that available data “does not provide firm evidence of causal relationships and, in a number of cases, the results are contradictory”.⁷¹

32. We questioned Defra on this and whether the evidence base in support of Breed Specific Legislation was sufficiently robust. We were told “that was almost 10 years ago, so there has been fresh evidence since then”.⁷² We were keen to see this fresh evidence and requested a copy of the data held by the Department. Following communications with the Department it transpired that no further reviews or formal studies had been conducted since 2009.⁷³

33. During our evidence session we became increasingly concerned that the Department was ignoring the weight of scientific evidence, and relying solely on a piece of data from the Metropolitan Police which was being extrapolated to apply to the whole of England and Wales.⁷⁴ We questioned Defra on whether this was a credible, evidence-based approach.⁷⁵ We were told that “you could say this relates to London and it is a particular year” but that “these Met statistics, in isolation, set the alarm bells ringing”.⁷⁶ Defra’s Deputy Director for Animal Welfare and Exotic Disease Control insisted that “it is credible to look at these figures and to form a conclusion that it is justified in retaining the controls we have on pit bulls”.⁷⁷

34. We are concerned that Defra’s arguments in favour of maintaining Breed Specific Legislation are not substantiated by robust evidence. It is even more worrying that non-existent evidence appears to have been cited before a Parliamentary Committee in support of current Government policy. This lack of clarity indicates a disturbing disregard for evidence-based policy-making. Defra should commission a comprehensive independent evidence review into the factors behind canine aggression, the determinants of risk, and whether the banned breeds pose an inherently greater threat. We expect to receive regular progress updates on the evidence review, and to be provided with the results no later than Easter 2019. These results must then be used to inform the Government’s future dog control strategy.

Damage potential and extending the banned list

35. In our evidence session, Defra argued that the ferocity and damage potential of prohibited breeds/types justified the ban and measures to limit the population size.⁷⁸ Many members of the public wrote to us highlighting concerns about the potential of banned breeds, specifically Pit Bull Terriers.⁷⁹ According to the BVA and RSPCA, however, hospital data show that attacks from large Mastiffs or Rottweilers can be just as

damaging as bites from Pit Bull types.⁸⁰ David Ryan told us that legal large bull or Mastiff types had substantial jaw pressure, physical body strength and the gameness of a dog type previously bred for fighting or guarding, and could be even more powerful than banned types.⁸¹ This would seem to suggest that more breeds should be included on the banned list for public safety.

36. We explored with witnesses whether the Government's 'risk-based approach' required such a move. We heard there were myriad problems with this. First, owners desiring a strong and aggressive dog could easily switch to another legal cross-breed and avoid the ban.⁸² Second, as David Ryan highlighted, banning breeds and crossbreeds based on risk level would generate a snowball effect:

you would never stop [...] If you then add American bulldogs to it, for example, you would then need to add crosses of American bulldogs. If you added Akitas to it you would need to add Akita crosses. You end up encompassing everything.⁸³

37. Third, because breed popularity waxes and wanes, prohibitions on the most prolific biters today would become outdated as fashions and preferences changed.⁸⁴ Finally, studies conducted abroad where dog population and bite rate data are available indicated that an impractically large number of dogs would need to be eradicated to prevent just a single bite incident.⁸⁵

38. Lord Gardiner told us that the Government did not intend to increase the number of banned breeds/types.⁸⁶ We queried whether this was logically consistent with a risk-based approach, given that the majority of bites came from legal breeds and some legal breeds possessed just as much damage potential as banned ones.⁸⁷ Lord Gardiner denied Defra's position was illogical:

I do not think so, because the overwhelming amount of what we are talking about in terms of numbers is dealing with it through Section 3, which is that we need to deal with dangerous dogs. It has been a position, and the Government are not moving from that position, that there are four prohibited breeds.⁸⁸

39. Defra says it has adopted a risk-based approach, but its justification for maintaining the breed ban in its current form is incoherent. Some legal breeds can pose just as great a risk to public safety as illegal breeds, and yet there are no legislative restrictions on their ownership. This inconsistency undermines the logic of the entire Act. We do not support extending the breed ban, as we do not believe it to be effective. However, if the

88 Q274

Government feels the ban is a valuable tool in reducing numbers of dangerous dogs, it must clarify why other dogs which can be just as dangerous should not be prohibited. We recommend that such a statement be provided in the response to this Report.

Identifying Pit Bull Terriers, and the prohibition on transferring Section 1 dogs

40. There is no recognised ‘Pit Bull Terrier’ breed in the UK, under Kennel Club classifications.⁸⁹ Dogs suspected of being a banned Pit Bull Terrier are therefore assessed according to the 1977 American Dog Breeders Association standard.⁹⁰ Parentage and DNA are not taken into account.⁹¹ Dogs are assessed instead on their physical characteristics, measured against a 100-point scale, of which 10 points are allocated to the dog’s attitude and behaviour. Defra guidelines state that there need only be a “substantial number of characteristics present so that it can be considered ‘more’ PBT [Pit Bull Terrier] than any other type of dog”.⁹²

41. Battersea Dogs & Cats Home said this approach “failed miserably” as it targeted a dog based on “the way that it looks rather than its propensity to cause harm”.⁹³ Battersea further highlighted that:

the Courts can regard a dog to be as a Pit Bull Terrier ‘type’ even if the dog does not have Pit Bull Terrier genetics in its ancestry [...] This makes no sense, given that these dogs were outlawed as Parliament believed they were genetically dangerous.⁹⁴

42. The RSPCA, Kennel Club, Blue Cross and the BVA similarly said the focus on appearance rather than temperament or aggression did little to protect the public.⁹⁵ The RSPCA noted that it had cared for Section 1 dogs that gave birth to three separate litters. In two of the litters, none of the dogs was subsequently identified as being Section 1 upon reaching adulthood. In the other litter, only half were determined to be Section 1.⁹⁶

43. The prohibition on transferring Section 1 dogs prevents the re-homing of banned dogs found by rescue centres; they are instead euthanised.⁹⁷ Owners who are no longer able to care for their Section 1 dog due to a change in circumstance also may not transfer the animal to a new keeper, even though the animal had previously been found to pose no threat.⁹⁸ We asked Defra whether this provision was necessary given that it led to the euthanasia of so many dogs:

98 Q91

Chair: to get to the point about the Battersea dog that was put down, as far as you are concerned, that is just collateral damage. It was a pit bull type and it may have been good-tempered, but as far as you are concerned, just put it down. Is that where you are?

Lord Gardiner: Yes.⁹⁹

44. A series of court rulings have allowed a degree of latitude over the prohibition on transfers. In one case, an owner was unlikely to pass the fit and proper person test but the Crown Court allowed the dog to be registered to a kennel carer. In another case, a dog that had previously been on the Index of Exempted Dogs had its exemption invalidated because the owner emigrated. A dog walker at the kennel was however allowed by the High Court to re-register the animal.¹⁰⁰

45. Battersea Dogs & Cats Home said these cases demonstrated “confusion and contradiction” over how Section 1 should be applied, and called for the prohibition on transferring Section 1 dogs to be revoked.¹⁰¹ This call was echoed by a number of other organisations.¹⁰² When we raised the issue of re-homing with the police, Inspector O’Hara told us that:

On a point of principle, we would go by the view: nice dog, nice person, no problem. We would be reasonably happy, with some degree of relaxation, about whether a home could be found for that particular dog that did not cause us a problem.¹⁰³

46. While agreeing that increased re-homing would be desirable, witnesses highlighted that adequate regulatory controls would be necessary to ensure public protection,¹⁰⁴ for example clearly defining or accrediting suitable animal sanctuaries and re-homing centres.¹⁰⁵ Inspector O’Hara said that greater regulation of animal centres was desirable in any case, to ensure appropriate due diligence checks were being conducted on re-homing suitability.¹⁰⁶

47. If animal centres were allowed to re-home Section 1 dogs, prospective owners would likely be subjected to the provisions and procedures currently required to obtain a certificate of exemption and register the animal on the Index of Exempted Dogs. According to Defra’s evidence submission, these provisions have been highly effective at ensuring exempted Section 1 dogs did not pose a risk to public safety:

No dog on the Index has been involved in a significant incident such as a major dog attack or fatality, suggesting that the scheme has achieved its objective of protecting public safety.¹⁰⁷

103 Q132

104 Blue Cross ([DDL0264](#))

105 Q95

106 Q123

107 Defra ([DDL0043](#)) para 12

48. Given this successful record, we questioned Defra on the logic behind the transfer ban in cases where the dog was good-tempered and had been determined by experts to pose no risk. The Department maintained there was a “non-zero risk” attached to Pit Bull types,¹⁰⁸ and that the prohibition on transfers was “part of restricting the number of these dogs in circulation” to minimise the “aggregate risk”.¹⁰⁹ Lord Gardiner subsequently wrote to us expressing concern that relaxing the prohibition would encourage the “casual transfer” of Section 1 dogs and signal that “the dangers associated with prohibited dogs are not as great as before”.¹¹⁰

49. **The prohibition on transferring Section 1 dogs has resulted in the unnecessary destruction of good-tempered dogs that could have been safely re-homed. Defra’s position is both illogical and inherently unfair. Whether a dog is euthanised or not can depend entirely on whether it ‘looks like’ a Pit Bull Terrier. It is unnecessarily cruel to forbid good-tempered dogs from being transferred to responsible owners willing to comply with the stringent provisions attached to keeping a Section 1 dog.**

50. **We do not accept Defra’s position that the destruction of dogs without owners is a necessary part of reducing risk. The Department told us that no dog on the Index of Exempted Dogs has been involved in an attack. This is a 100 percent success record. We are not clear why these conditions would become ineffective if extended to dogs in re-homing centres.**

51. *To avoid imposing an unnecessary death sentence on good-tempered animals, the Government should remove the ban on transferring Section 1 dogs to new owners. This should be accompanied by adequate regulation of animal centres and appropriate safeguards to ensure the re-homing of Section 1 dogs is conducted responsibly and safely.*

108 Q278

109 Q293

110 Defra ([DDL0470](#))

4 A different approach - education and enforcement

52. A common theme throughout our inquiry was the need for a fundamental shift towards a more holistic approach to dog control that prioritised prevention through education, responsible ownership, and early intervention. Defra said it recognised dog control required “an element of prevention”, and highlighted its work on microchipping, updating guidance, and dialogue with the police.¹¹¹ Witnesses from animal welfare charities felt existing efforts fell far short of what was required, however, and called for the Government to develop a new approach.¹¹²

53. We focused on the four areas that witnesses identified as being crucial to effective prevention, namely improvements to education; changes to enforcement practices; new legislation and powers; and learning lessons from abroad. Our inquiry did not attempt to develop exhaustive proposals for an alternative dog control model; this would need to be explored in the wide-ranging Government review we have called for. Our aim was rather to draw the Government’s attention to issues of particular concern, and suggest measures that could be implemented either immediately or as part of a wider overhaul of dog control strategy.

Education

54. Our evidence was clear that human factors played a prominent role prior to the majority of dog attacks, and that any systematic attempt to reduce the number of incidents needed to place a greater emphasis on education.¹¹³ Hospital data indicate that children under nine are statistically at most risk of being bitten,¹¹⁴ and are more likely to suffer serious and disfiguring injuries on the face and head.¹¹⁵ There is however no requirement for schools to make use of the readily available materials on dog safety.¹¹⁶ Neither does routine national information provided to new parents include specific information on staying safe around dogs.¹¹⁷

55. Witnesses told us that targeted initiatives to educate children on safe human-dog interactions were therefore key.¹¹⁸ Some advocated adding this information to mandatory childhood education.¹¹⁹ The RSPCA said this would avoid the “piecemeal and sometimes duplicated approach” currently being delivered by the charity sector.¹²⁰

119 RSPCA ([DDL0229](#)), British Veterinary Association and British Small Animal Veterinary Association ([DDL0235](#))

120 RSPCA ([DDL0229](#)) para 31

56. Defra told us however that the national curriculum was “already broad enough to allow other subjects to be included”, and that the Secretary of State for Education had announced in March 2018 that he would make no further changes to the national curriculum during the remainder of this Parliament (2022).¹²¹

57. Young children are at most risk of dog attacks, and many suffer horrific injuries. Better childhood education on staying safe around dogs is needed to reduce the high number of avoidable incidents. A consistent approach is needed across the country to avoid the current post-code lottery of intervention. Defra should commission a childhood education plan from experts and charities to determine the most effective education measures and how these could be implemented consistently across the country. The Department should then support the roll-out of this plan.

58. Dogs Trust highlighted that wider education of dog owners and the general public was also crucial to reducing incidents.¹²² Defra said it was making “efforts to encourage more responsible dog ownership and target the owners of dogs through advice”,¹²³ but witnesses felt this was not enough.¹²⁴ The BVA advocated national awareness campaigns and much greater provision of standardised information resources to promote safe interactions between dogs and owners, family members, and the general public.¹²⁵

59. We heard that stricter regulation of the dog-training and behaviour industry would be important to ensuring that any efforts to encourage attendance at educational courses produced the desired results.¹²⁶ David Ryan told us that currently

anyone can set themselves up as a dog-trainer [...] There are some horrendous examples of dogs being made worse by bad training practices”.¹²⁷

Dogs Trust similarly argued that regulation of training was “absolutely fundamental.”¹²⁸

60. Education initiatives would likely have to contend with ‘hard to reach’ dog owners. David Ryan raised concerns over the difficulties in reaching this demographic and the “complacency” among some owners:

Many people believe they know all there is to know and that they are doing it right. Many people are wrong; otherwise there would not be so many incidents.¹²⁹

61. There were differing views on how education of dog owners should be best achieved. Battersea Dogs & Cats Home argued against proposals to enforce education through dog licensing, maintaining that such licenses would be an ineffective “tax on dog owners”.¹³⁰ The organisation highlighted instead the benefits of collaborative initiatives between charities and local authorities.¹³¹

130 Q98

131 Battersea Dogs & Cats Home ([DDL0257](#)) p.5

62. Others argued however that an ‘owner education scheme’ would have to be compulsory, otherwise conscientious owners would attend but the main target groups would simply opt out.¹³² One of the options discussed involved the introduction of compulsory third party liability insurance for dog owners, which would be linked to education or training classes.¹³³ The Communication Workers Union said compulsory third party liability insurance—which could be as low as 50p per week—was desirable in any case as many attack victims were currently inadequately compensated.¹³⁴ The police acknowledged the potential benefits of both mandatory training and insurance, but highlighted that the current legislative framework lacked sufficient sanctions to ensure such requirements could be adequately enforced.¹³⁵

63. Greater awareness of responsible ownership and dog behaviour would reduce attack incidents. It would also help alleviate the financial burden on the health services and enforcement agencies that have to deal with the consequences of attacks. Defra should introduce a targeted awareness campaign to inform dog owners and the general public about responsible ownership and safe interactions. Defra should further develop proposals to help local enforcement bodies increase engagement among hard to reach demographics. This should involve a thorough assessment of the merits of mandatory third party liability insurance and training classes for dog owners.

64. It is important that any efforts to encourage attendance at educational training courses are not undermined by bad practices in the private industry. As part of the review we have called for, the Government should investigate the impact of poor dog training practices in the private industry, and the merits of stricter regulations to ensure all trainers are properly accredited according to a standardised framework.

Enforcement practices

65. Both local authorities and the police have responsibility for dog control. Our evidence was clear that reductions to attack rates and improvements to animal welfare would require changes to local enforcement practices, and police and court processes.

Effective local enforcement

66. Our inquiries into local enforcement indicated that individual instances of good practice needed to be scaled up across the country. The Local Environmental Awareness on Dogs (LEAD) initiative provided a good example.¹³⁶ This local police-led initiative had substantially reduced dog bites by bringing together a range of enforcement and stakeholder bodies.¹³⁷ Although the initiative was widely praised, we heard that there was no appropriate national framework to ensure this and similar approaches were replicated across the country, and that the “current postcode lottery” of collaborative intervention would therefore continue.¹³⁸

136 See Defra ([DDL0043](#)) para 22

137 Blue Cross ([DDL0264](#)) p.4

138 National Companion Animal Focus Group ([DDL0405](#)) p.3

67. Both the police and Local Government Association (LGA) acknowledged that local-level collaboration could be improved, but highlighted the significant obstacles presented by resource constraints and competing priorities.¹³⁹ The LGA said cutbacks had substantially eroded the capacity of councils to take a proactive approach to dog control, and that there was also a “lack of clarity” from central government to support joint working.¹⁴⁰

68. Dogs Trust raised additional concerns that many dog incidents went unrecorded by local authorities and police, preventing authorities from building a case log of evidence that could be used to trigger early interventions.¹⁴¹ The wider lack of data recorded on the circumstances surrounding dog bites was also seen as problematic, as it hampered research into potential trigger factors that could be used to inform effective prevention strategies.¹⁴²

69. The Kennel Club believed that the current system offered little incentive to collect useful data on dog bites, which were simply catalogued numerically rather than being treated as a public health issue meriting further information logs.¹⁴³ These points were echoed by the RSPCA and BVA, who called for a centralised reporting database with a mandatory requirement for information on bite incidences to be recorded.¹⁴⁴

70. We questioned the Minister on how the Government could better support local enforcement. Lord Gardiner told us that he recognised collaborative projects “as a positive way forward”, but that “a lot of the remedies of this have to be at local level”.¹⁴⁵ The Minister acknowledged that there was no budget to roll out collaborative schemes across the country.¹⁴⁶ Defra’s Deputy Director Animal Welfare and Exotic Disease Control noted that better data on dog attacks would be welcome.¹⁴⁷

71. Whilst we appreciate the challenging financial landscape, it is clear that more support is needed for local-level collaboration. We are also concerned that joint working is overly reliant on the dedication of individual officers and enforcement bodies. *The Government should commit more resources to supporting collaborative dog control initiatives, and facilitate the upscaling of successful pilot projects across the country. Initially it would seem sensible to concentrate resources in areas with the highest rates of dog attacks.*

72. Better data is needed to support bite prevention strategies. *Defra should engage with the relevant Departments, local authorities and police forces to ensure local staff record all incidents appropriately. We further recommend that the Government introduces a centralised database to record information on dog bites, level of severity, and the circumstances of the incident. This is key to improving understanding of the most effective ways to protect the public.*

147 Q254

Police and court processes

73. Our evidence highlighted a range of issues with Section 1 case processing times, the Interim Exemption Scheme, and legal penalties. Processing times for dog cases, and the kennelling costs, were described by Deputy Chief Constable Pritchard as “excessive”.¹⁴⁸ The police noted that some cases took over 18 months to resolve, and called for timescales to be placed on court proceedings to speed matters up.¹⁴⁹ The RSPCA agreed with the need for swifter processing and supported wider take-up of practices operated in London and Manchester, where police forces had arranged designated days for dog case hearings with the local courts.¹⁵⁰

Longest stay in kennel by an individual dog in days

Source: BBC FOI¹⁵¹

74. Our evidence also highlighted the lack of consistency in the application of the Interim Exemption Scheme (IES). To avoid prolonged kennelling, the IES—also known as ‘dog bail’—allows police to return a suspected Section 1 dog to its owners during the exemption process.¹⁵² Battersea Dogs & Cats Home described the bail process as a “postcode lottery”, with many police forces refusing to grant it.¹⁵³

75. Similarly, the sanctions handed down by courts were condemned as being improperly or inconsistently implemented.¹⁵⁴ The Communication Workers Union said existing sanctions were sufficient in theory, but that there was a “huge disparity” in the penalties handed out. The organisation called for greater consistency across cases and for the full range of sentencing powers to be utilised to deter and punish offenders.¹⁵⁵

148 Q116

153 Q76

154 Communication Workers Union ([DDL0463](#))

155 Q216, Communication Workers Union ([DDL0463](#))

76. We asked Lord Gardiner if he had any concerns about the police and court enforcement processes. He said that “if there were areas that the police had problems with, I would want to know of them”,¹⁵⁶ and agreed that “in court cases, expedition in all matters is the optimum”.¹⁵⁷

77. Prolonged kennelling, lengthy court processing times and inconsistent sentencing are not conducive to effective dog control. Defra should work with the Home Office and Ministry of Justice to develop proposals for speeding up Section 1 case processing times. This could involve encouraging framework agreements between local courts and enforcement bodies to ensure cases are heard within pre-agreed timescales. The Government should also review the use of the Interim Exemption Scheme across the country and issue targeted guidance to forces that are not employing it consistently. We further recommend that Defra engages with the Ministry of Justice to ensure sentencing guidelines are being properly observed and that consistently robust sanctions are being applied across the country.

Rural policing

78. The National Farmers’ Union (NFU) told us that more action was needed to tackle livestock worrying, which remained a serious concern for rural communities.¹⁵⁸ We could not form a complete assessment of the scale and impact of livestock attacks, as they are not required to be formally recorded. According to estimates from SheepWatch UK, up to 15,000 sheep were killed in 2016.¹⁵⁹ NFU Mutual estimated that the direct impacts of livestock attacks cost the agricultural industry £1.6 million per year.¹⁶⁰ Deputy Chief Constable Pritchard told us owners were not present in the majority of cases, often because the dog had escaped.¹⁶¹

79. Guy Smith, Deputy President of the NFU, highlighted that education was key to tackling this issue:

You talk to dog walkers and say, “Why did you let that animal off the lead?” They say, ‘Well, it is not one of those dangerous dogs. It is a Labrador’. They think it has gone and played with livestock.¹⁶²

80. He further noted that, because the majority of attacks occurred without the owner present, it was crucial to get the message through to people who might not even be aware of their dog’s actions. He suggested that tougher penalties for repeat offenders and an increased rate of court prosecution and fines would be beneficial, as these would increase deterrence and likely reach the target audience through local media coverage.¹⁶³ He also suggested the Government could do more to support initiatives to raise awareness of appropriate dog handling in rural areas.¹⁶⁴

81. *Defra should work closely with the National Police Chiefs' Council to support closer collaboration across rural police forces, and encourage robust action to be taken against the owners of dogs involved in livestock worrying.*

EMBARGOED ADVANCE NOTICE: Not to be published in full, or in part, in any form before 00.01am on Wednesday 17 October 2018

5 A different approach - changing legislation and learning lessons from abroad

New powers for early intervention

82. Our evidence indicated that future progress in prevention and early intervention would require new powers. A system of dedicated Dog Control Notices was cited by welfare charities as being a particularly promising alternative to current Community Protection Notices (CPNs).¹⁶⁵ CPNs were introduced in 2014 as a general mechanism to tackle anti-social behaviour, allowing authorities to require the recipient to do certain things. Authorities could therefore send owners of nuisance dogs to a training class, for example.¹⁶⁶ According to a 2017 BBC survey, however, around 77 percent of councils were failing to use them. Of the 18 police forces that provided information to the survey, only four said they had issued one.¹⁶⁷

83. The Communication Workers Union criticised CPNs as being “too complex, cumbersome, unspecific, slow, resource intensive and not often used because of this”.¹⁶⁸ Battersea Dogs & Cats Home said the CPN’s threshold for taking action was too high, as the trigger for issuing an initial warning letter required ‘persistent or continuing’ poor behaviour.¹⁶⁹ We also heard that there was no national database for recording CPNs, meaning that if an owner moved to a different jurisdiction, the new local authority and police force would be unlikely to be aware of their history.¹⁷⁰

84. Dog Control Notices were implemented in Scotland as an early intervention measure, under which a trained council officer would assess the dog and situation, and impose suitable restrictions or requirements on the owner.¹⁷¹ We heard this system was preferable as it had a lower threshold for action, facilitated easier early intervention to address problem behaviours, and would be administered by an officer with appropriate dog control skills.¹⁷² Evidence from Scotland suggested however that such new powers would only be effective if accompanied with commensurate resource increases and thorough training for officers.¹⁷³

85. We asked the Minister whether he would consider introducing Dog Control Notices. He said that he would be interested to see if there were lessons to be learned and promised to look into the matter.¹⁷⁴ In a follow-up letter, the Minister stated that CPNs “do the same thing as Dog Control Notices” and that he believed the powers under CPNs were “being used to good effect”.¹⁷⁵

173 Scottish SPCA ([DDL0056](#)) p.3

174 Q339

175 Defra ([DDL0470](#))

86. **Community Protection Notices (CPNs) are not delivering the desired results. They are not tailored to tackling dog control, there is no central system for recording an individual's history, and they are not being used by the majority of local authorities and police forces. We recommend that the Government reviews the use of CPNs across the country, and issues targeted guidance to authorities that are not using them effectively. A centralised system for tracking CPNs must also be developed to ensure authorities have access to an individual's case history.**

87. **We urge the Government to introduce specific Dog Control Notices, which would support more targeted early intervention. This must be accompanied by commensurate resource increases to ensure that officers receive the necessary training on dog behaviour.**

88. Another form of early intervention involved 'speed awareness courses for dog owners'. The Kennel Club advocated compulsory attendance on such courses for owners whose dogs had been involved in a low- or mid-level offence. These courses could be geared towards a particular problem, focusing on responsible ownership for lower-level offences, and on dog training or dealing with aggression for more serious issues.¹⁷⁶ Deputy Chief Constable Pritchard also supported introducing such restorative schemes, saying that "we should mandate it. We do it for other types of offence; we could do it for this".¹⁷⁷ There is limited provision for such a scheme under the Anti-social Behaviour, Crime and Policing Act 2014, though it is unclear whether this Act is being used to such effect, and whether it provides for a tiered range of formal, targeted courses.¹⁷⁸

89. **The Government should introduce regulations requiring dog owners involved in low- to mid-level offences to attend a compulsory dog awareness and training course, similar to speed awareness courses for drivers.**

Consolidating legislation

90. Dog control is covered by many pieces of legislation, some dating back almost 150 years.¹⁷⁹ Blue Cross said that the patchwork of laws caused confusion among enforcers over their responsibilities and powers, and uncertainty among owners about their liabilities.¹⁸⁰ We heard that this lack of clarity was hampering efforts to improve dog control. For example, many local authorities reportedly advise dog owners that the police are the correct point of contact, while police advise the opposite.¹⁸¹

91. Defra told us it had issued guidance to enforcement bodies regarding their respective roles.¹⁸² Mark Berry, Chair of the National Animal Companion Forum, noted however that some enforcement staff remained unclear on their powers and that consolidating legislation would bring clarity to both dog owners and enforcers.¹⁸³ The LGA said that

176 The Kennel Club ([DDL0288](#)) p.6

177 Q122

178 The Kennel Club ([DDL0288](#)) p.6

179 See for example [Dogs Act 1871](#)

180 Blue Cross ([DDL0264](#))

181 Q98

182 Defra ([DDL0043](#)) para 21

183 Qq155-157

whilst the various pieces of legislation provided useful tools,¹⁸⁴ the disparate laws should be consolidated into a single Act “fit for modern day purposes” which would “also support more strategic and future-proofed approach”.¹⁸⁵

92. The current patchwork of dog control legislation is causing unnecessary confusion amongst enforcement bodies and dog owners. The Government should consolidate the disparate pieces of legislation into a single coherent Dog Control Act. We expect proposals for this Act to be introduced following the conclusion of the Government review we have called for.

Learning lessons from abroad

93. Across the evidence on all of the foregoing points in this Report, we consistently heard that the Government should explore models operated abroad so that it could benefit from lessons learned when developing and implementing improvements.¹⁸⁶ The RSPCA pointed out that other places across the world had achieved substantial reductions in bite incidences by channelling resources into targeted prevention and responsible ownership strategies rather than focusing on Breed Specific Legislation.¹⁸⁷ The ‘Calgary model’ for example was widely cited as an effective approach which had achieved substantial bite reductions.¹⁸⁸ This focused on widespread education programmes targeting owners and schoolchildren, community-level working to encourage responsible ownership, ensuring a high number of dog registrations, and enforcing strict penalties for owners of dogs involved in attacks.¹⁸⁹

94. Other stakeholders highlighted the risks posed by some non-banned breeds and noted the possibility of a framework that replaced BSL with precautionary conditions of ownership.¹⁹⁰ This could involve requiring certain breeds/types to be registered and behaviourally assessed, and making prospective owners attend a training course. Similar schemes are operated in France and Austria.¹⁹¹

95. We asked the police and Defra whether they had explored alternative dog control models operated abroad. The police told us that “there are plenty of examples across the world, although we have not looked at them in detail”, and that they would support Defra-led research on alternative risk-management approaches.¹⁹² During our evidence session with Defra officials, however, we were told that “you could look at evidence from the Netherlands and say, ‘Look at what they are doing or what we are doing’. What we need to look at is what is happening in our country”.¹⁹³ We were concerned that this attitude suggested a lack of interest in learning lessons from elsewhere. Indeed, the witnesses’ responses to our questions indicated their awareness of alternative approaches was

based largely on evidence submitted recently to our inquiry, rather than any initiatives undertaken by Defra itself.¹⁹⁴ Lord Gardiner assured us that he “would be interested in seeing what other countries have done and what the results of that have been”.¹⁹⁵

96. We were concerned at Defra’s apparent lack of interest in learning from experiences abroad. Whilst the Government obviously should not ‘copy and paste’ initiatives from other countries, it is important to investigate successful programmes elsewhere to ensure the UK’s future strategy benefits from a wide variety of evidence and lessons learned. *In line with Lord Gardiner’s support for learning lessons from abroad, the Department should engage with foreign governments, local authorities and police forces to develop a deeper understanding of different dog control models and successful approaches that could be used in the UK.*

Conclusions and recommendations

Current approach to dog control

1. We were concerned to hear that the Government considered the Dangerous Dogs Act to be successful on the grounds that it was impossible to tell how many attacks would have occurred without the law. This is not convincing. Children and adults are suffering catastrophic injuries. The increase in attacks - most of them from legal breeds - clearly indicates that the current approach is failing to protect the public adequately. (Paragraph 22)
2. *To ensure the public receives the best possible protection, the Government should commission an independent review of the effectiveness of the Dangerous Dogs Act 1991 and wider dog control legislation. This review should begin no later than January 2019. We expect this review to take account of the concerns and recommendations raised throughout this Report.* (Paragraph 23)

Examining Section 1 of the Dangerous Dogs Act

3. We are concerned that Defra's arguments in favour of maintaining Breed Specific Legislation are not substantiated by robust evidence. It is even more worrying that non-existent evidence appears to have been cited before a Parliamentary Committee in support of current Government policy. This lack of clarity indicates a disturbing disregard for evidence-based policy-making. *Defra should commission a comprehensive independent evidence review into the factors behind canine aggression, the determinants of risk, and whether the banned breeds pose an inherently greater threat. We expect to receive regular progress updates on the evidence review, and to be provided with the results no later than Easter 2019. These results must then be used to inform the Government's future dog control strategy.* (Paragraph 34)
4. Defra says it has adopted a risk-based approach, but its justification for maintaining the breed ban in its current form is incoherent. Some legal breeds can pose just as great a risk to public safety as illegal breeds, and yet there are no legislative restrictions on their ownership. This inconsistency undermines the logic of the entire Act. We do not support extending the breed ban, as we do not believe it to be effective. However, if the Government feels the ban is a valuable tool in reducing numbers of dangerous dogs, it must clarify why other dogs which can be just as dangerous should not be prohibited. *We recommend that such a statement be provided in the response to this Report.* (Paragraph 39)
5. The prohibition on transferring Section 1 dogs has resulted in the unnecessary destruction of good-tempered dogs that could have been safely re-homed. Defra's position is both illogical and inherently unfair. Whether a dog is euthanised or not can depend entirely on whether it 'looks like' a Pit Bull Terrier. It is unnecessarily cruel to forbid good-tempered dogs from being transferred to responsible owners willing to comply with the stringent provisions attached to keeping a Section 1 dog. (Paragraph 49)

6. We do not accept Defra's position that the destruction of dogs without owners is a necessary part of reducing risk. The Department told us that no dog on the Index of Exempted Dogs has been involved in an attack. This is a 100 percent success record. We are not clear why these conditions would become ineffective if extended to dogs in re-homing centres. (Paragraph 50)
7. *To avoid imposing an unnecessary death sentence on good-tempered animals, the Government should remove the ban on transferring Section 1 dogs to new owners. This should be accompanied by adequate regulation of animal centres and appropriate safeguards to ensure the re-homing of Section 1 dogs is conducted responsibly and safely.* (Paragraph 51)

A different approach - education and enforcement

8. Young children are at most risk of dog attacks, and many suffer horrific injuries. Better childhood education on staying safe around dogs is needed to reduce the high number of avoidable incidents. A consistent approach is needed across the country to avoid the current postcode lottery of intervention. *Defra should commission a childhood education plan from experts and charities to determine the most effective education measures and how these could be implemented consistently across the country. The Department should then support the roll-out of this plan.* (Paragraph 57)
9. Greater awareness of responsible ownership and dog behaviour would reduce attack incidents. It would also help alleviate the financial burden on the health services and enforcement agencies that have to deal with the consequences of attacks. *Defra should introduce a targeted awareness campaign to inform dog owners and the general public about responsible ownership and safe interactions. Defra should further develop proposals to help local enforcement bodies increase engagement among hard to reach demographics. This should involve a thorough assessment of the merits of mandatory third party liability insurance and training classes for dog owners.* (Paragraph 63)
10. It is important that any efforts to encourage attendance at educational training courses are not undermined by bad practices in the private industry. *As part of the review we have called for, the Government should investigate the impact of poor dog training practices in the private industry, and the merits of stricter regulations to ensure all trainers are properly accredited according to a standardised framework.* (Paragraph 64)
11. Whilst we appreciate the challenging financial landscape, it is clear that more support is needed for local-level collaboration. We are also concerned that joint working is overly reliant on the dedication of individual officers and enforcement bodies. *The Government should commit more resources to supporting collaborative dog control initiatives, and facilitate the upscaling of successful pilot projects across the country. Initially it would seem sensible to concentrate resources in areas with the highest rates of dog attacks.* (Paragraph 71)
12. Better data is needed to support bite prevention strategies. *Defra should engage with the relevant Departments, local authorities and police forces to ensure local staff record all incidents appropriately. We further recommend that the Government introduces*

a centralised database to record information on dog bites, level of severity, and the circumstances of the incident. This is key to improving understanding of the most effective ways to protect the public. (Paragraph 72)

13. *Prolonged kennelling, lengthy court processing times and inconsistent sentencing are not conducive to effective dog control. Defra should work with the Home Office and Ministry of Justice to develop proposals for speeding up Section 1 case processing times. This could involve encouraging framework agreements between local courts and enforcement bodies to ensure cases are heard within pre-agreed timescales. The Government should also review the use of the Interim Exemption Scheme across the country and issue targeted guidance to forces that are not employing it consistently. We further recommend that Defra engages with the Ministry of Justice to ensure sentencing guidelines are being properly observed and that consistently robust sanctions are being applied across the country. (Paragraph 77)*
14. *Defra should work closely with the National Police Chiefs' Council to support closer collaboration across rural police forces, and encourage robust action to be taken against the owners of dogs involved in livestock worrying. (Paragraph 81)*

A different approach - changing legislation and learning lessons from abroad

15. *Community Protection Notices (CPNs) are not delivering the desired results. They are not tailored to tackling dog control, there is no central system for recording an individual's history, and they are not being used by the majority of local authorities and police forces. We recommend that the Government reviews the use of CPNs across the country, and issues targeted guidance to authorities that are not using them effectively. A centralised system for tracking CPNs must also be developed to ensure authorities have access to an individual's case history. (Paragraph 86)*
16. *We urge the Government to introduce specific Dog Control Notices, which would support more targeted early intervention. This must be accompanied by commensurate resource increases to ensure that officers receive the necessary training on dog behaviour. (Paragraph 87)*
17. *The Government should introduce regulations requiring dog owners involved in low- to mid-level offences to attend a compulsory dog awareness and training course, similar to speed awareness courses for drivers. (Paragraph 89)*
18. *The current patchwork of dog control legislation is causing unnecessary confusion amongst enforcement bodies and dog owners. The Government should consolidate the disparate pieces of legislation into a single coherent Dog Control Act. We expect proposals for this Act to be introduced following the conclusion of the Government review we have called for. (Paragraph 92)*
19. *We were concerned at Defra's apparent lack of interest in learning from experiences abroad. Whilst the Government obviously should not 'copy and paste' initiatives from other countries, it is important to investigate successful programmes elsewhere to ensure the UK's future strategy benefits from a wide variety of evidence and lessons learned. In line with Lord Gardiner's support for learning lessons from*

abroad, the Department should engage with foreign governments, local authorities and police forces to develop a deeper understanding of different dog control models and successful approaches that could be used in the UK. (Paragraph 96)

Formal minutes

Wednesday 12 September 2018

Members present:

Neil Parish, in the Chair

Alan Brown	Mrs Sheryll Murray
John Grogan	David Simpson
Sandy Martin	Angela Smith
Kerry McCarthy	

Draft Report (*Controlling dangerous dogs*) proposed by the Chair, brought up and read.

Ordered, That the draft Report be read a second time, paragraph by paragraph.

Paragraphs 1 to 96 read and agreed to.

Summary agreed to.

Resolved, That the Report be the Ninth Report of the Committee to the House.

Ordered, That the Chair make the Report to the House.

Ordered, That embargoed copies of the Report be made available, in accordance with the provisions of Standing Order No. 134.

[Adjourned till Wednesday 10 October 9.15 am
